

Pop-up/Settings Issues:

- **If you click on items in Content/Calendar/Syllabus and nothing happens:** Many times this is caused by pop-up blockers. There are two basic types of pop-up blockers to deal with.
 - **Virus Check Pop-up Blockers:** If you press Control (CTRL) on your keyboard while clicking on the link at the same time and nothing happens, the pop-up blocker can usually be found on your virus check program.
 - **Search Bar Pop-up Blockers:** If you press Control (CTRL) on your keyboard while clicking on the link at the same time and the page opens, the pop-up blocker can usually be found on a search bar such as Google, Yahoo, etc.
- **If your webpage is out of proportion:** It could be that part of the page is shown at the top of the window, but the links are located below the area for a left frame. When this occurs, change the view size of the window by going to the right-hand bottom of the screen and changing it up to between 100% and 110%. This generally resolves the problem. Changing it to a lower percentage has not resolved the problem in the past.
